

I wish to go on record as being opposed to broadband over power lines proposal . This has been proven to cause unacceptable interference to all communication , not just amateur ,but emergency and public service as well. I also support the establishment of more hf privileges for non code tecs . in the amateur service. I think code will stay on the freq. but should not be a requirement for privileges on some hf bands as proposed by ve examers and arrl. thank you for your consideration .
